The Problem

Legacy EZ-Filer System Issues

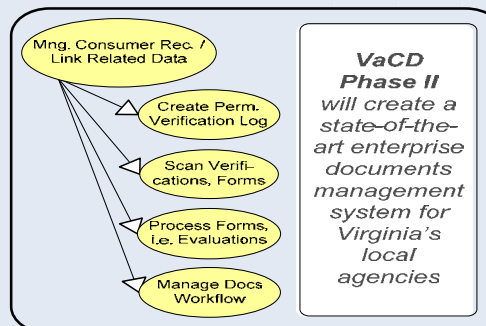

Short Term Solution

VaCD Phase I – Work Around EZ-Filer

Long Term Solution

VaCD Phase II – Build New System

VaCD Phase I Goals

Create a utility program to work around defects in EZ-Filer.

Phase I-A:

Modify VDSS SPIDeR to provide a narrowed query 'result set' that can be run for multiple family members. This will be saved as the permanent verification log - PVL.

Phase I-B:

Provide a Microsoft Word macro based evaluation form. Pre-populate ADAPT demo-graphics

Both the PVL and Eval. files are made 'visible' to EZ-Filer

VaCD Phase II Goals

Create a state-of-the-art social services documents management application available to any local DSS

Phase II-A

Create basic consumer file management

Recreate VaCD Phase-I functionality in new software platform.

Phase II-B

Add additional document management capability, including the scanning of verifications

Phase II-C

Add case workflow: scheduler, alerts, notes

Enhance system administration
